9. Experiment: AI-Assisted Features & Zia Analytics for Event Registration Form

Aim:

To explore and configure built-in artificial intelligence capabilities (Zia) and advanced analytics in Zoho Creator for the Event Registration Form, enabling intelligent queries, registration forecasting, and automated insights.

Overview:

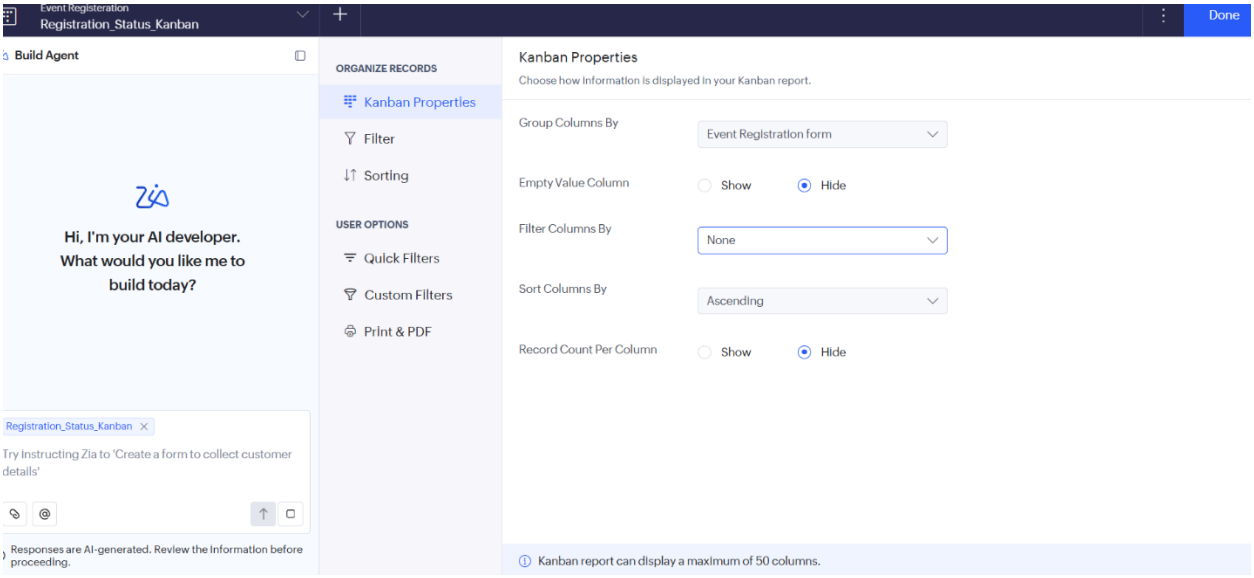

Zoho Creator integrates Zia, its conversational AI and analytics assistant, to support natural-language queries, automated charts, anomaly detection, and predictive analytics for Event Registration Form data, such as participant details, event choices, and registration dates.

Feature / Capability	Functional Description in Zoho Creator
Zia Voice & Chat	Allows users to ask questions about event registrations and request reports using conversational commands, where available.
Smart Analytics	Suggests useful metrics, pivot tables, and charts for event-wise registrations, registration dates, and participant trends.
Anomaly Detection	Can help identify unusual registration spikes or irregular entries in the event registration data, if this feature is available.

Procedure:

1. **Enable Analytics & Zia: Open the Event Registration Form application in Zoho Creator, navigate to the Analytics module, and check whether Zia AI assistant integration is available for the event and registration data.**
2. **Generating AI-Driven Dashboards: Use the natural-language query prompt box or available dashboard recommendations to explore registration data. Example query: "Show the total number of registrations for each event as a bar chart."**
3. **Configuring Predictors & Insights: Where supported, use historical registration records to examine trends, estimate expected attendance, and identify unusually high registration counts or possible duplicate entries.**

Kanban report can display a maximum of 50 columns.

Result:

The experiment explored how Zia and analytics features in Zoho Creator can support the Event Registration Form by querying registration data, presenting event-wise insights, and identifying trends. Availability of individual AI features depends on the Zoho Creator plan and application configuration.
