6. Event Registration Form - Automation Suite & Workflow Options

Aim

To build and document the automation layer for the Event Registration Form using Zoho Creator workflow options, covering form workflows, schedules, approvals, payments, blueprints, batch workflows, report workflows, and functions.

1. Objective

This experiment demonstrates the use of Zoho Creator workflow options to automate the event registration process, from participant submission and confirmation to payment tracking, attendance, and event reporting.

2. Workflow Mapping Overview

Workflow Type	Configuration / Purpose
Form Workflow	On_Event_Registration_Submit_Workflow – sends confirmation emails and organizer notifications when a participant submits the registration form.
Schedule	Daily_Event_Reminder_Schedule – sends scheduled reminders about event details, session dates, and pending registration steps.
Approval	Event_Registration_Approval – supports organizer review and approve/reject decisions for registrations requiring confirmation.
Payment	Event_Payment_Confirmation_Workflow – updates payment confirmation and registration status after payment is recorded.
Blueprint	Event_Registration_Lifecycle_Blueprint – manages stages from Submitted to Under Review, Confirmed, and Checked-In.

Batch Workflow	Bulk_Registration_Update_Batch – processes registration records in batches and flags incomplete details.
Report Workflow	OnEdit_Update_Registration_Report_Workflow – refreshes registration, attendance, and payment metrics after report edits.
Function	Generate_Event_Confirmation_Function – reusable Deluge function for sending event confirmation messages.

3. Detailed Workflow Configurations & Evidence

Form Workflow (On_Event_Registration_Submit_Workflow)

- **Purpose: Automatically sends a registration acknowledgement to the participant and a notification to the organizing team when a new record is created in the Event_Registration_Form.**
  `Event_Registration_Form.`
- **Action: Configure an acknowledgement email action to notify the participant and organizer after successful form creation.**

Schedule Workflow (Daily_Event_Reminder_Schedule)

- **Purpose: Runs daily at a scheduled time to check upcoming event dates and registrations that require follow-up.**
- **Action: Sends reminder notifications to participants about event details, session schedules, or pending payment/confirmation steps.**

Approval Workflow (Event_Registration_Approval)

- **Purpose: Provides an organizer review process for registrations that require approval, such as limited-seat sessions or special participant categories.**
- **Events: Manages the start of the review and the approver actions, with separate Approve and Reject paths. Approved registrations receive a confirmation email; rejected registrations can receive a status update.**

•

Blueprint (Event_Registration_Lifecycle_Blueprint)

- **Purpose: Governs the progression of registrations through defined event-management stages.**
- **Stages & Transitions: Moves records through Submitted (Start_Review), Under Review (Confirm_Registration or Reject_Registration), Confirmed (Mark_Attendance), and Checked-In.**
  (Start_Review), Under Review (Approve_Loan or Reject_Loan), Confirmed (Disburse_Loan), and finally Checked-In.

Batch Workflow (Bulk_Registration_Update_Batch)

- **Purpose: Processes registration records in batches during off-peak hours to update statuses or identify incomplete registrations.**
- **Deluge Integration: Checks required registration details and flags records with missing information for manual review by the organizing team.**

Function Implementation (Generate_Event_Confirmation_Function)

Purpose: Uses participant details such as Participant_Name, Email, and Event_Name to retrieve a registration by ID, validate the details, and send an event confirmation message.

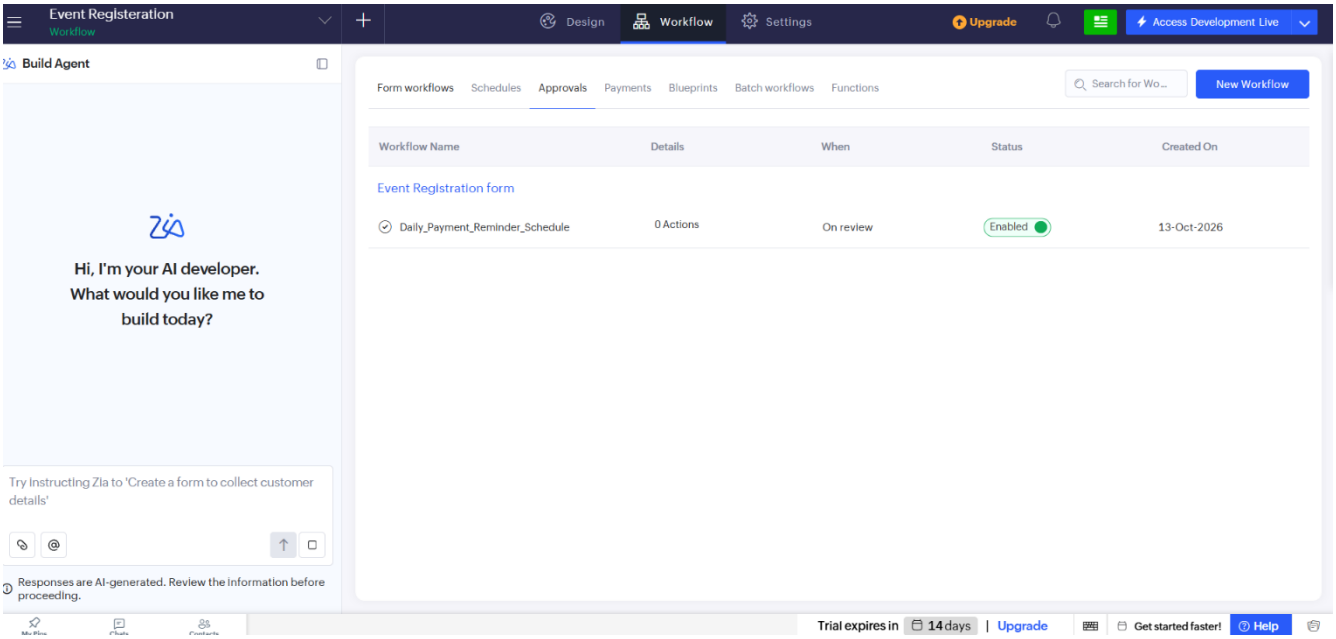

Figure 5 – Batch workflow: Bulk_Registration_Update_Batch with batch execution and Deluge action.

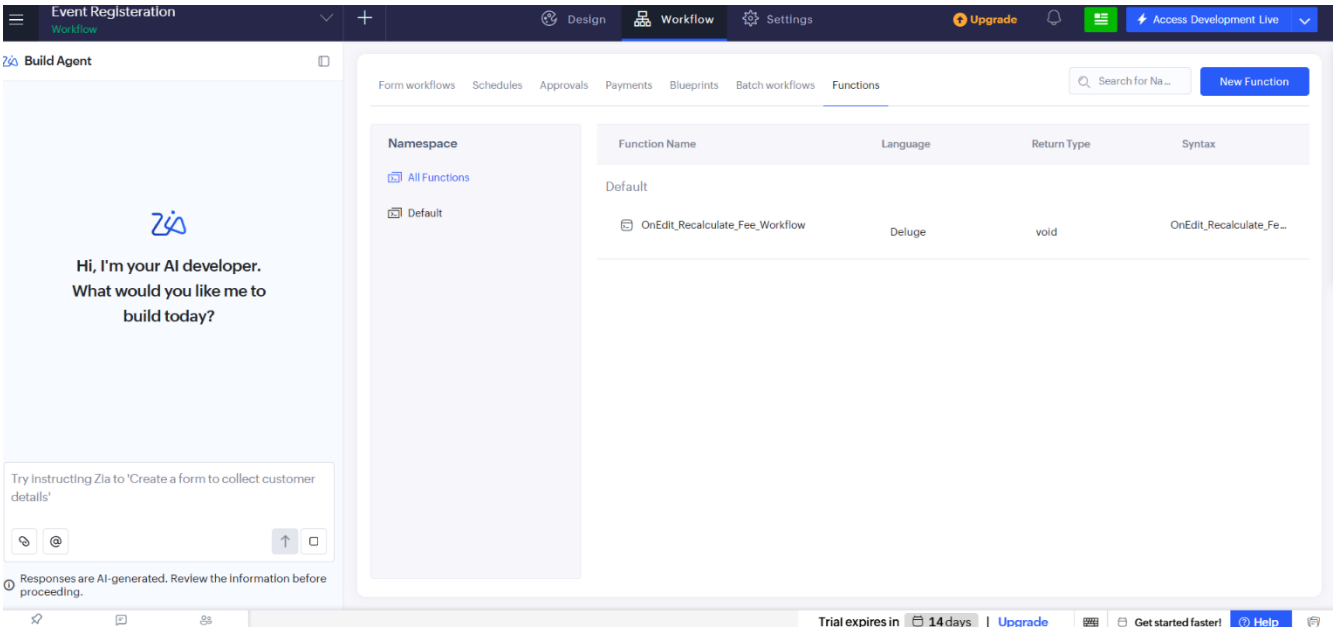

Figure 6 – Function: Generate_Event_Confirmation_Function with Deluge implementation

Result

The Event Registration Form was designed and documented using Zoho Creator workflow options, including form triggers, schedules, approvals, blueprints, batch processing, report workflows, and custom Deluge functions for event registration management.
